

2013

Today's Connected Home

In 2013, the most advanced living spaces are completely interconnected, monitored and controlled from our fingertips. **DO WE EVER REALLY "LEAVE HOME"?** The interconnection of **THINGS**— smartphones, tablets, and smart devices — has given us greater control and connection than ever before.

What is the dog doing?

Home monitoring video cameras stream HD video and send email and mobile alerts when they detect motion or loud noises

A warm welcoming

Smart thermostats have activity and temperature sensors, Wi-Fi and humidity control

Wash your clothes at off-peak times!

App-controlled appliances, like washing machines, keep your laundry cycle moving

You're out of milk!

Smart Grid-ready fridges tell you when it's time to shop

Traveling? Don't fret!

Wi-Fi controlled security systems reduce burglary rates by up to 350% (Greenwich Study of Residential Security)

The toilet seat heats up at 6:30 am...the alarm rings at 6:40 am

A toilet seat-warming app takes care of what's behind you

Save money on your energy bill

Wi Fi LED Light bulbs are managed remotely and create ambient scenes

Your new love... he cleans!

Robotic cleaners vacuum before the guests arrive

Don't wake at the crack of dawn to water the lawn

Smartphone-controlled sprinkler systems save money

In 2013 we'll enjoy the interconnection of all things devices — your phone, your tablet, your PC, your TV, your car, your toilet seat.
